TypeScript Assignments – Tuples

Tuple Basics

1. Create a tuple containing a student's name, age, and course.
2. Create a tuple containing [number, string] and assign appropriate values.
3. Create a tuple representing a product: [id, name, price].
4. Create a tuple representing an employee: [number, string, boolean].
5. Create a tuple containing [string, number, string] for a person's name, age, and city. Access and print each value.

Readonly Tuple

6. Create a readonly tuple containing a student's name and age.
7. Create a readonly tuple [number, string, boolean].
8. Try to change one element of a readonly tuple and observe the error.
9. Create a readonly tuple representing a product [id, name, price].
10. Create a readonly tuple representing coordinates [x, y] and calculate the distance from the origin without modifying the tuple.
